

OP eFax™

Welcome to the future of paperless data exchange.

We get it. Despite the advances that have come with modern technology, many medical practices continue to use “old-school” technology like faxing as part of their everyday workflow. Every day, millions of pages are transmitted between healthcare providers and organizations to achieve optimal patient outcomes. OP eFax offers an affordable, HIPAA-compliant electronic fax solution for busy pediatric practices. Our fully integrated offering has everything you need to securely send and receive fax communications every day. No fax machines, no fax servers, and no long-term commitment. It’s that easy!

Here’s why you’ll love our solution:

- Workarounds involving “Print to Fax” for outbound faxing and usage of a shared network drive for inbound faxing are no longer necessary.
- Fax management is handled directly within OP.
- Users benefit from real-time statuses and on-screen, detailed notifications of fax failures with the option to resend.
- Informative status messages are provided within OP so users can see outbound fax progression.
- Anything that can be transmitted from OP can be sent via eFax.
- Flexible pricing plans are available with options to fit any budget.

It’s time to reimagine the role that eFax can have with your practice and your referral network.
